

# Smart Select Carbo King

## Smart Select Carbo King has been formulated to stimulate plant energy.

Carbo King contains essential elements for sugar production; combined with root stimulants and metabolism enhancers, Carbo King should be applied to trigger photosynthesis for improved stress resistance, plant hormone production and calcium uptake by improved root tip development. Carbo King is suitable for all crops and should be applied 2 weeks prior to flowering. This will ensure flowering is maximised due to improved grain numbers, reduced seed aborting and roots being most active when the seasons change.

### Summary of benefits:

- Stimulates root growth.
- Improved disease resistance.
- Improved stress resistance.
- Improved plant energy for key physiological processes.
- Improved Calcium uptake and cell wall strength.

### Product Analysis (W/V%)

Zinc.....	3.5%
Copper.....	0.25%
Molybdenum.....	0.025%
Nitrogen.....	2.1%
Phosphorous.....	10.4%
Potassium.....	4.1%
Iron.....	0.53%
Magnesium.....	0.25%
Sulphur.....	4.5%
Manganese.....	2.4
Plus Kelp and Fulvic Acid	

### Suitable nutrition/crop stimulation for:

- 1 tonne cereal crop
- 0.5 tonne canola crop
- 0.4 tonne lentil crop
- 1 tonne faba bean crop

### Compatibility:

Compatible with most agricultural chemicals but a jar test is recommended. Consult your Crop Smart representative with any queries.

### Application Rates

#### Foliar:

1-5lt per hectare with a minimum water rate of 80lt

#### In furrow/fertigation:

5-10lt per hectare with enough water to ensure even application

Refer to label for more detailed information.
